

Highlights of the Week

Polar bears live in very cold areas, Camels live in hot areas, Moles live under the ground, and Bats live in caves and fly in the air and Dolphins live in the Oceans. What is common between all of them? They are mammals and are everywhere. It is what we classify humans as too. Yes, we are learning about characteristics and lifecycle of mammals.

After window cleaning, chair scrubbing and table scrubbing has been a popular choice in the room. This is a complex work that requires a great amount of concentration. The direct aim of this work is to enable the child to independently wash a chair and also a care of his/her environment. The indirect aim is the control of the muscular action particularly of the hand, light as well as energetic, remembering the order and sequence of action leads to the development of concentration.

In science, we are learning about parts and importance of the flower. They are not only for smelling and for looking attractive, but very important parts of the plants/tree. They are the one who reproduces another plant.

We have learned and seen how plants grow and their different parts. Isn't it fun gardening together as a family? I am sure you would all love that experience and enjoy those moments. Our May Day mixture is a wonderful opportunity for our classroom and school as a whole. You all are invited and thanks in advance to be part of this wonderful event.

Happy 4th walk around the Sun, Lubaina!

Dr. Maria Montessori's Words:

“The study of the child ...may have an infinitely wider influence, extending to all human questions. In the mind of the child we may find the key to progress... .”

Maria Montessori
